Do you see any problems regarding the education and the students knowledge that are needed in your courses? A.k.a. Do you see that students knowledge from previous courses is missing?

Absolutely. I need to run around in the corridor and ask other teachers to know exactly what and how much they teach in different 'KCs', or read a lot of slides to get the overview.

Would you use the service today if existed? If not: What could make you change your mind?

YES! It would be great to see a graph containing tag with the 'KCs' that the student have instead of asking all examiners.

Are there any specific functions you would like to have?

It should be possible to change the 'KCs' in a course.
A warning if someone changes the content of a course that will affect other courses. It should also be possible for students to give feedback on what they have learned in a course. This will give an overview of what the students actually learned in the course and not only what the teachers think that the students did learn. Both students and teachers will set the 'KCs' together in a course.

How much information would you like to see at once? I.e. More general information or a bit more specific?
The biggest interest is to find out what knowledge the students already got when they start a course.

How would you prefer to interact with the service? Through the web or a downloadable program?

Available in the browser. Accessible in Canvas or something easy, it is important that it is easy to access.
Not something that I need to download.

Do you think the service could change how you teach?

Possibly what, I would have a better understanding of the importance of the content in a course.

Extra

Student should be able to compare what they have learned and what the examiner says that they have learned in a specific course.

Questions for us?

When can I have it?!
