Interview with Fredrik Bengtsson - (Introduction to programing (Python), Real-time programming)

Do you see any problems regarding the education and the students knowledge that are needed in your courses? A.k.a. Do you see that students knowledge from previous courses is missing?

Generally I have not noticed very much on the courses I am educating i, but I have noticed that many are many who are bad at writing reports and that is noticeable when it's time to do the examination job.

- This would be discovered when the examination work course require that the reports have to be written on a higher level than on the level were it's taught in certain courses

Would you use the service today if existed? If not: What could make you change your mind?

Yes, but I believe it would be very difficult to implement it due to all the enormous amount of information needed.

Are there any specific functions you would like to have?
Even for example when writing reports should be a form of KC

How much information would you like to see at once? I.e. More general information or a bit more specific?

How would you prefer to interact with the service? Through the web or a downloadable program?
A web service would be preferred because it probably would not be used all the time

Do you think the service could change how you teach?
Nom or maybe, or yes.
